

UPPALAPATI HARSHITHA CHOWDARY

Data Analyst

+91 7093891749 | harshithauppalapati454@gmail.com | linkedin.com/in/harshitha-uppalapati-6696282a2 | github.com/Harshi1215

PROFESSIONAL SUMMARY

Results-driven Data Analyst with 1+ year of hands-on experience in data cleaning, exploratory analysis, dashboard development, and business reporting. Proficient in Python (Pandas, NumPy), SQL, Power BI, and Excel. Google-certified in Data Analytics with additional credentials in SQL and Analytics. Skilled in converting complex datasets into actionable KPI dashboards and executive insights. Domain exposure in KYC verification, AML transaction monitoring, and risk categorization sets a strong compliance analytics foundation.

CERTIFICATIONS

- Google Data Analytics Professional Certificate — Google / Coursera
- MongoDB for SQL Experts — MongoDB (SQL)
- Introduction to Analytics — Great Learning

TECHNICAL SKILLS

Analytics & Reporting:	Data Cleaning, EDA, KPI Analysis, Statistical Analysis, Dashboard Design, KPI Reporting, Storytelling with Data
Tools & Platforms:	Power BI, Microsoft Excel, SQL, MongoDB, Python, Jupyter Notebook, Tableau
Libraries:	Pandas, NumPy, Matplotlib, Seaborn
Domain Knowledge:	KYC Verification, AML Compliance, Risk Categorization, Transaction Monitoring, Client Onboarding
Soft Skills:	Analytical Thinking, Stakeholder Reporting, Problem Solving, Documentation, Communication

WORK EXPERIENCE

Data Analyst – Design Engineer | Symnn Networks

May 2025 – Present

- Performed end-to-end data analysis on design and project datasets, identifying trends and delivering actionable insights to stakeholders.
- Built and maintained Power BI dashboards to track project KPIs, design revision cycles, and operational metrics.
- Cleaned, transformed, and structured large datasets using Excel and SQL, improving data quality and reporting accuracy by 30%.
- Analyzed design change requests using rule-based logic to verify alignment with project requirements and regulatory standards.
- Prepared executive summary reports and data-driven presentations for management, improving cross-department communication.
- Automated recurring data tasks and reporting workflows using Python (Pandas, NumPy), reducing manual effort significantly.

IoT Research Intern | IIT Hyderabad

September 2024 – November 2024

- Analyzed IoT sensor datasets to detect patterns and anomalies, contributing key findings to academic research.
- Performed data collection, preprocessing, and validation from embedded IoT systems using Python.
- Visualized sensor data trends using Matplotlib and Seaborn to support research conclusions.

Python Learning Intern | Skill Vertex (Remote)

April 2023 – June 2023

- Developed Python scripts for data manipulation and analysis using Pandas and NumPy.
- Implemented data cleaning routines to process structured datasets efficiently.

PROJECTS

Delivery Trust Intelligence Dashboard – NexDrop Case Study | [Power BI](#) | [SQL](#) | [Python](#) | [Excel](#)

- Built an end-to-end Power BI dashboard analyzing delivery reliability, ETA performance, customer satisfaction, and premium subscription behavior for a simulated hyperlocal delivery platform.
- Engineered a synthetic dataset of ~7,500 records covering customer ratings, weather impact, delivery delays, and subscription types; performed full data cleaning and preprocessing with Python (Pandas/NumPy).

- Used SQL for aggregations, filtering, and performance metric extraction; designed dashboards with KPIs, donut charts, bar charts, scatter plots, and slicers.
- Identified that premium users experienced higher dissatisfaction despite faster ETAs and that weather conditions amplified delivery delays; recommended dynamic ETA prediction and compensation trigger frameworks.

Customer KYC Risk Categorization Model | [Excel](#) | [SQL](#) | [Power BI](#) | [Tableau](#)

- Developed a structured KYC verification model classifying clients into Low, Medium, and High-risk tiers using rule-based scoring logic applied to simulated customer profiles (PAN, address, occupation, income source).
- Built interactive Power BI and Tableau dashboards to visualize risk distribution, customer segmentation, and onboarding compliance metrics.
- Created standardized KYC verification checklists and compliance documentation aligned with regulatory standards.

AML Transaction Monitoring & Suspicious Activity Detection | [Excel](#) | [SQL](#) | [Power BI](#)

- Designed a transaction monitoring system analyzing simulated banking datasets using SQL rule-based alert logic to flag high-risk transactions exceeding defined thresholds.
- Built Power BI dashboards visualizing transaction volumes, alert counts, and risk trends by customer segment.
- Generated SAR-style investigation summaries highlighting suspicious patterns — directly replicating real-world AML analyst workflows.

Customer Churn Analysis | [Python](#) | [SQL](#)

- Analyzed customer behavioral data (tenure, usage, demographics) to identify churn patterns and retention opportunities using Pandas, Seaborn, and SQL.
- Built visualizations comparing churned vs. retained customer cohorts and delivered actionable retention strategy recommendations based on data-driven findings.

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science and Engineering

Sathyabama Institute of Science & Technology | 2021 – 2025 | CGPA: 7.8/10

Intermediate – MPC

Sri Chaitanya Mahila Junior Kalasala | 2019 – 2021 | CGPA: 7.3/10
